KEVIN TO SPEAK AT CODAWORX ART, TECHNOLOGY & PLACE SUMMIT

Kevin will speak at the [CODAworx Art, Technology & Place Summit](#) in **El Paso, Texas, October 2-4**, where he will share his experiences as a pioneer in large-format 3D printing sculpture.

"Little did I know where things would lead when I first had my 8-foot-tall 3D printer built," says Kevin. The event will be held at the [El Paso Museum of Art](#). In its second year, the CODAworx summit focuses on the ways creative professionals are incorporating technology to create innovative art that is changing the way we experience our environments.

"I'm happy about sharing what I've learned while creating 3D-printed sculpture, including a new approach that I'm very excited about," says Kevin.

Visit the always-updated [Events page](#) for information about upcoming events.

UNDER WAY IN THE STUDIO: NEW, OLD, TRANSFORMATIONAL

Kevin has nearly completed the second branch of [Weeping Tree](#), an 8-foot-tall metal sculpture with 5 sweeping branches and kinetic flowers.

The flowers are being finished with a special auto paint applied by a hot rod

specialist.

"Wait until you see them!" he says. [See Weeping Tree's progress](#) on its own page.

[Stretch](#), Kevin's first water sculpture, was in the studio for some repairs (*opening photo*). Kevin replaced the intake system. "When a work incorporates water, maintenance is a must," he explains. "I tell people who want a water sculpture or fountain that they are also getting a new hobby."

Kevin has also recently had a breakthrough with a new approach to **3D-printed sculpture**. It began with the piece [Rainbow He](#). Kevin then created two larger sculptures on his 8-foot-tall Gigante 3D printer, [Looking](#)

[In](#) (above, left) and [Inside Out](#). "The finish of these artworks is rough and wild, a deconstructed take on what 3D printing can do," says Kevin. "People are saying it looks like ice, quartz, a fish skeleton, lace and even jellyfish."

Kevin's new approach affects the interaction of light with the materials. He's not the only one delighted with the result. [Rainbow He](#) sold within hours.

NEW IN 3D PRINTING: EXPERIMENTING WITH SETTINGS SPARKS CREATIVE INSPIRATION

Kevin's [latest post](#) on his blog page, ["A Sculptor's Take on 3D Printing."](#) reveals how adjusting settings has led to new, dramatic artworks that are much different than his previous designs.

In the free blog post ["'Playing around' leads to intriguing visual development"](#) Kevin talks about trying out different settings in his

software, which has inspired him to create fresh new works that toy with light.

BEHIND THE SCENES: 'WHAT IS YOUR FAVORITE PART OF YOUR JOB?'

"When I was driving a truck for a living, I had a lot of time to let my mind wander - while I was keeping an eye on the road, of course!

"Often I would reverse engineer something I had seen that day, whether it was at one of the businesses I visited or something I had read, seen online, or just created in my head.

"Now, as an artist, it is pretty much my job to make what I see in my mind.

"That is undoubtedly what makes me happiest: being able to convert what I see in my mind into something that people can touch, see and hear.

"It's a certain sort of alchemy"
